## Assignment – 1:

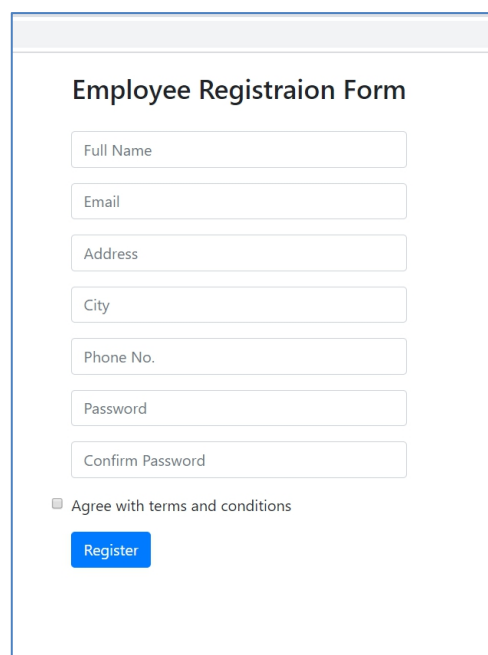

### Problem Statement

Create simple Employee registration form using reactive form.

#### **Perform the following operations to build the application:**

1. Create a new component “reactive-form.”
2. The form should display below mentioned fields:
  - Full name
  - Address
  - City
  - Email
  - Phone No
  - Password
  - Confirm Password
3. Do not apply any validation.
4. Make use of CSS classes and Bootstrap to design the application.

Here is an example of how your application should look:

The image shows a mockup of an 'Employee Registration Form'. It is a vertical form with a light gray header bar. The title 'Employee Registraion Form' is centered at the top. Below the title are seven text input fields, each with a placeholder label: 'Full Name', 'Email', 'Address', 'City', 'Phone No.', 'Password', and 'Confirm Password'. Below these fields is a checkbox labeled 'Agree with terms and conditions'. At the bottom of the form is a blue 'Register' button. The entire form is enclosed in a thin blue border.

After building the application, prepare a ZIP file of the application code and upload it on LMS in Assignment solution section for evaluation.
