Assignment – 1:

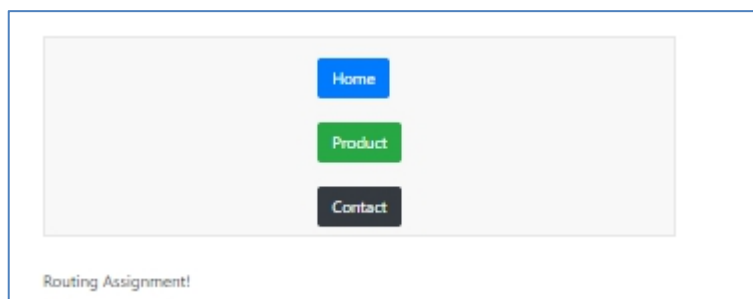

Problem Statement

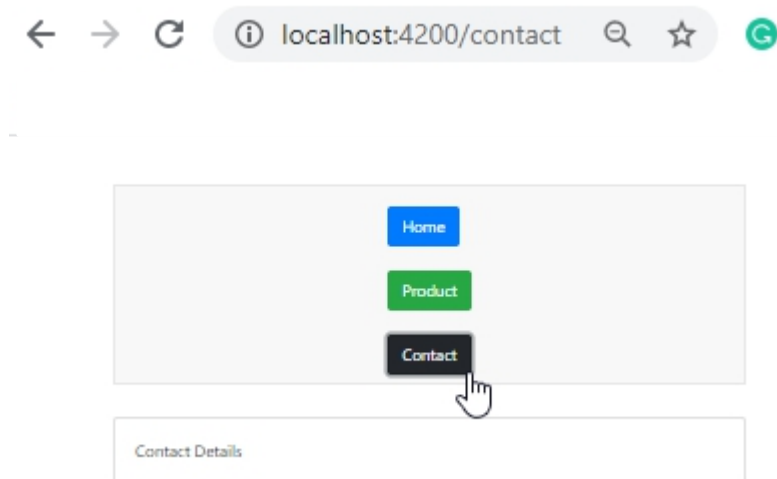

Build an Angular Application to add basic routing to different components without reloading the entire application

Perform the following operations to build the application:

1. Create three new components
 - a. Home
 - b. Product
 - c. Contact
2. Define route constant
3. Initialize the routes using forRoot method
4. In the app.component.html add navigation tabs using routerLink to navigate to different components
5. Implement the routerLinkActive directive to highlight a particular component for which the route has been requested
6. Use the paths defined in routes constant to navigate.
7. Make use of CSS classes and Bootstrap to design the application.

Here is an example of how your application should look:

After building the application, prepare a ZIP file of the application code and upload it on LMS in Assignment solution section for evaluation.
